## Partner XE™ Software As A Service

*Your Data, Your Business: Our Number One Priority*

Enjoy lower, more predictable costs, peace of mind knowing your data is safe, less time worrying about IT concerns and more time to do what you do best.

### IT Security: More Important Than Ever

Data is increasingly at risk these days. More and more, agencies are sharing information across multiple locations and branch offices, paper backups of important information are scarce, and hackers are intent on accessing your personal information.

The three widely accepted elements of IT security are confidentiality, integrity and availability. Up until about 20 years ago, confidentiality was considered the most important security element, followed by integrity and then availability. These days, availability is at the top of the list. The first goal of modern security is to insure that systems are predictably dependable in the face of all sorts of malice.

SIS clients benefit from a state-of-the-art security system featuring a secure environment, secure server communications, "always on" availability, and multiple disaster recovery systems.

## Why Software as a Service?

*Your Data, Your Business: Our Number One Priority*

When you choose Partner XE, SIS' fully hosted insurance agency management system, not only do you enjoy lower more predictable costs, you also get peace of mind knowing your data is safe, less time worrying about technology, and more time to focus on what you do best .

### Where's My Data?

Your data will be stored on the Application Server. The Partner XE Client workstation connects to the Application Server while you work in Partner XE.

### What Can I Do With My Data?

With Partner XE, your data always belongs only to you. You are in total control of your data on the Application Server. You can print reports, create and print letters, and send photos or scanned documents to the server directly from your workstation. You can even extract data to your computer to use with other applications. SIS strives to ensure that access to your data for any purpose (even purposes other than usability within Partner XE) is swift and efficient. Your current vendor can provide assistance if you have any questions about data accessibility.

### What Are The Advantages To Having Partner XE Hosted?

Besides the fact that it's easier to let someone else worry about managing the Application Server and handling regular upgrades and maintenance, having SIS host your site will provide you with:

- Good, reliable backups made in a timely manner and stored for as long as needed
- Hardware that is kept operating properly and efficiently with redundancy built in to keep the system running even if there are hardware failures or catastrophes
- Software that is kept updated with the latest service packs and security patches
- Users and data which are guarded by
- firewalls and up-to-date antivirus software
